(54) PRINT CHARGING METHOD AND ITS DEVICE

(57)Abstract:
PROBLEM TO BE SOLVED: To attain charging with tariff corresponding to the print amounts of print job data.
SOLUTION: In a printer managing server 5, a data controlling part 21 separates job data from a data receiving part 19 into a user account and job data 8, and analyzes the number of print pages or kind of the separated job data 8, and stores it in a job storing part 23. An account file is prepared from the analyzed number of print pages and the user account, and stored in an account storing part 25. A charging and settling part 33 calculates charged tariff for the printing of each job data 8 based on a preliminarily set price per one page and the number of print pages of each job data 8 recorded in each account file. Then, the kind of the job data, the name of a job preparer, the number of print pages, and the calculated charged tariff or the like are integrated into a reading list, and user displayed by referring to a job storing part 23, an account storing part 25, and a table storing part 24.

LEGAL STATUS

[Date of request for examination]   13.02.2001

[Date of sending the examiner's decision of rejection]   03.06.2003

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
